

1. Upon opening the app for the very first time, the merchant will be prompted to enter the merchant id and merchant key, which will register the unique phone id with our system. This is similar to how the previous merchant app works that you developed.
2. Upon loading after the initial registration, the screen will show the following screen. It will pass the merchant_key and merchant_id value to an API that will send the logo for the blue 310x150 box. It will download the QR code value as well. We will also pass on data for the image displayed in the gray box on the right. The logo and the QR code should be stored on the app and updated once per day.

3. If a user selects check-in by phone, they will be taken to the following screen. The screen will still load the logo and QR code as previously (based on stored value). The keypad will be used to enter a 10 digit phone number. Once the full 10-digit number has been entered, it should autosubmit. There also will need to be a way to clear or delete numbers in case of a mistake.

4. If a person elects to check-in by email, they will be taken to the following page to enter their email. The app can use the tablets native keyboard as we have kept the form up high enough to

avoid issues.

The screenshot shows a mobile application interface for 'BUS_NAME REWARDS - EMAIL CHECK-IN'. It features a white background with a blue border. At the top, the title 'BUS_NAME REWARDS - EMAIL CHECK-IN' is displayed in blue. Below the title is a text input field with the placeholder text 'ENTER YOUR EMAIL ADDRESS'. Centered below the input field is a blue button with the text 'CHECK-IN' and a right-pointing chevron. In the bottom right corner, there is a logo that reads 'powered by BIGCITY REWARDS'.

5. If a person wishes to register they will see the following screen to which they will use to enter their email address. This can also use the native keyboard. There should be an optin value sent to the reg form as well if the checkbox for joining mailing list is selected. The second screenshot here, represents the confirmation page after successful registration.
